

NC14 Mathematics Coverage

<p>Aims</p>	<p>The national curriculum for maths aims to ensure that all pupils:</p> <ul style="list-style-type: none"> <input type="checkbox"/> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately. <input type="checkbox"/> reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language <input type="checkbox"/> can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions. <p>Mathematics is an interconnected subject in which pupils need to be able to move fluently between representations of mathematical ideas. The programmes of study are, by necessity, organised into apparently distinct domains, but pupils should make rich connections across mathematical ideas to develop fluency, mathematical reasoning and competence in solving increasingly sophisticated problems. They should also apply their mathematical knowledge to science and other subjects.</p> <p>The expectation is that the majority of pupils will move through the programmes of study at broadly the same pace. However, decisions about when to progress should always be based on the security of pupils' understanding and their readiness to progress to the next stage. Pupils who grasp concepts rapidly should be challenged through being offered rich and sophisticated problems before any acceleration through new content. Those who are not sufficiently fluent with earlier material should consolidate their understanding, including through additional practice, before moving on.</p>	
<p>Subject content</p>	<p>Key stage 1</p> <p>The principal focus of mathematics teaching in key stage 1 is to ensure that pupils develop confidence and mental fluency with whole numbers, counting and place value. This should involve working with numerals, words and the four operations, including with practical resources [for example, concrete objects and measuring tools]. At this stage, pupils should develop their ability to recognise, describe, draw, compare and sort different shapes and use the related vocabulary. Teaching should also involve using a range of measures to describe and compare different quantities such as length, mass, capacity/volume, time and money. By the end of year 2, pupils should know the number bonds to 20 and be precise in using and understanding place value. An emphasis on practice at this early stage will aid fluency.</p> <p>Pupils should read and spell mathematical vocabulary, at a level consistent with their</p>	<p>Lower Key stage 2</p> <p>The principal focus of mathematics teaching in lower key stage 2 is to ensure that pupils become increasingly fluent with whole numbers and the four operations, including number facts and the concept of place value. This should ensure that pupils develop efficient written and mental methods and perform calculations accurately with increasingly large whole numbers. At this stage, pupils should develop their ability to solve a range of problems, including with simple fractions and decimal place value. Teaching should also ensure that pupils draw with increasing accuracy and develop mathematical reasoning so they can analyse shapes and their properties, and confidently describe the relationships between them. It should ensure that they can use measuring instruments with accuracy and make connections between measure and number. By the end of year 4, pupils should have memorised their multiplication tables up to and including the 12 multiplication table and show precision and fluency in their work.</p> <p>Pupils should read and spell mathematical vocabulary correctly and confidently, using their growing word reading knowledge and their knowledge of spelling.</p> <p>Upper Key stage 2</p> <p>The principal focus of mathematics teaching in upper key stage 2 is to ensure that pupils extend their understanding of the number system and place value to include larger integers. This should develop the connections that pupils make between multiplication and division with fractions, decimals, percentages and ratio. At this stage, pupils should develop their ability to solve a wider range of problems, including increasingly complex properties of numbers and arithmetic, and problems demanding efficient written and mental methods of calculation. With this foundation in arithmetic, pupils are introduced to the language of algebra as a means for solving a variety of problems. Teaching in geometry and measures</p>

St Mary's CE Primary School NC 2014 planning – Mathematics

	increasing word reading and spelling knowledge at key stage 1.		should consolidate and extend knowledge developed in number. Teaching should also ensure that pupils classify shapes with increasingly complex geometric properties and that they learn the vocabulary they need to describe them. By the end of year 6, pupils should be fluent in written methods for all four operations, including long multiplication and division, and in working with fractions, decimals and percentages. Pupils should read, spell and pronounce mathematical vocabulary correctly.			
	Y1	Y2	Y3	Y4	Y5	Y6
<p>Pupils should be taught about:</p> <p><u>Number – number and place value</u></p>	<ul style="list-style-type: none"> <input type="checkbox"/> count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number <input type="checkbox"/> count, read and write numbers to 100 in numerals; count in multiples of twos, fives and tens <input type="checkbox"/> given a number, identify one more and one less <input type="checkbox"/> identify and represent numbers using objects and pictorial representations including the number line, and use the language of: equal to, more than, less than (fewer), most, least <input type="checkbox"/> read and write numbers from 1 to 20 in numerals and words. 	<ul style="list-style-type: none"> <input type="checkbox"/> count in steps of 2, 3, and 5 from 0, and in tens from any number, forward and backward <input type="checkbox"/> recognise the place value of each digit in a two-digit number (tens, ones) <input type="checkbox"/> identify, represent and estimate numbers using different representations, including the number line <input type="checkbox"/> compare and order numbers from 0 up to 100; use <, > and = signs <input type="checkbox"/> read and write numbers to at least 100 in numerals and in words <input type="checkbox"/> use place value and number facts to solve problems. 	<ul style="list-style-type: none"> <input type="checkbox"/> count from 0 in multiples of 4, 8, 50 and 100; find 10 or 100 more or less than a given number <input type="checkbox"/> recognise the place value of each digit in a three-digit number (hundreds, tens, ones) <input type="checkbox"/> compare and order numbers up to 1000 <input type="checkbox"/> identify, represent and estimate numbers using different representations <input type="checkbox"/> read and write numbers up to 1000 in numerals and in words <input type="checkbox"/> solve number problems and practical problems involving these ideas. 	<ul style="list-style-type: none"> <input type="checkbox"/> count in multiples of 6, 7, 9, 25 and 1000 <input type="checkbox"/> find 1000 more or less than a given number <input type="checkbox"/> count backwards through zero to include negative numbers <input type="checkbox"/> recognise the place value of each digit in a four-digit number (thousands, hundreds, tens, and ones) <input type="checkbox"/> order and compare numbers beyond 1000 <input type="checkbox"/> identify, represent and estimate numbers using different representations <input type="checkbox"/> round any number to the nearest 10, 100 or 1000 <input type="checkbox"/> solve number and practical problems that involve all of the above and with increasingly large positive numbers <input type="checkbox"/> read Roman numerals to 100 (I to C) and know that over time, the numeral system changed to include the concept of zero and place value. 	<ul style="list-style-type: none"> <input type="checkbox"/> read, write, order and compare numbers to at least 1 000 000 and determine the value of each digit <input type="checkbox"/> count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000 <input type="checkbox"/> interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers, including through zero <input type="checkbox"/> round any number up to 1 000 000 to the nearest 10, 100, 1000, 10 000 and 100 000 <input type="checkbox"/> solve number problems and practical problems that involve all of the above <input type="checkbox"/> read Roman numerals to 1000 (M) and recognise years written in Roman numerals. 	<ul style="list-style-type: none"> <input type="checkbox"/> read, write, order and compare numbers up to 10 000 000 and determine the value of each digit <input type="checkbox"/> round any whole number to a required degree of accuracy <input type="checkbox"/> use negative numbers in context, and calculate intervals across zero <input type="checkbox"/> solve number and practical problems that involve all of the above.

St Mary's CE Primary School NC 2014 planning – Mathematics

					reasoning about equal sides and angles.	
<u>Geometry – position and direction</u>	<input type="checkbox"/> describe position, direction and movement, including whole, half, quarter and three- quarter turns.	<input type="checkbox"/> order and arrange combinations of mathematical objects in patterns and sequences <input type="checkbox"/> use mathematical vocabulary to describe position, direction and movement, including movement in a straight line and distinguishing between rotation as a turn and in terms of right angles for quarter, half and three-quarter turns (clockwise and anti- clockwise).		<input type="checkbox"/> describe positions on a 2-D grid as coordinates in the first quadrant <input type="checkbox"/> describe movements between positions as translations of a given unit to the left/right and up/down <input type="checkbox"/> plot specified points and draw sides to complete a given polygon.	<input type="checkbox"/> identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed.	<input type="checkbox"/> describe positions on the full coordinate grid (all four quadrants) <input type="checkbox"/> draw and translate simple shapes on the coordinate plane, and reflect them in the axes.
<u>Statistics</u>		<input type="checkbox"/> interpret and construct simple pictograms, tally charts, block diagrams and simple tables <input type="checkbox"/> ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity <input type="checkbox"/> ask and answer questions about totalling and comparing categorical data.	<input type="checkbox"/> interpret and present data using bar charts, pictograms and tables <input type="checkbox"/> solve one-step and two-step questions [for example, 'How many more?' and 'How many fewer?'] using information presented in scaled bar charts and pictograms and tables.	<input type="checkbox"/> interpret and present discrete and continuous data using appropriate graphical methods, including bar charts and time graphs. <input type="checkbox"/> solve comparison, sum and difference problems using information presented in bar charts, pictograms, tables and other graphs.	<input type="checkbox"/> solve comparison, sum and difference problems using information presented in a line graph <input type="checkbox"/> complete, read and interpret information in tables, including timetables.	<input type="checkbox"/> interpret and construct pie charts and line graphs and use these to solve problems <input type="checkbox"/> calculate and interpret the mean as an average.
<u>Ratio and proportion</u>						<input type="checkbox"/> solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts

St Mary's CE Primary School NC 2014 planning – Mathematics

						<input type="checkbox"/> solve problems involving the calculation of percentages [for example, of measures, and such as 15% of 360] and the use of percentages for comparison <input type="checkbox"/> solve problems involving similar shapes where the scale factor is known or can be found <input type="checkbox"/> solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.
<u>Algebra</u>						<input type="checkbox"/> use simple formulae <input type="checkbox"/> generate and describe linear number sequences <input type="checkbox"/> express missing number problems algebraically <input type="checkbox"/> find pairs of numbers that satisfy an equation with two unknowns <input type="checkbox"/> enumerate possibilities of combinations of two variables.
